Duo FX Board how does the multi touch work?

Posted by andy - 2008/06/21 00:10

We just bought a Hitachi Duo FX Board and it seams to work well. Good to have touch function and a Hitachi short throw projector so that we don´t get the lamp in our eyes.
I haven´t tested out all the software yet - one thing I noticed was that multi touch only works in a separate small screen and not all over the board.

Any one else using this board that knows more?

The software I don´t find that easy to use as the smart board software. Otherwise ok product but we stay with our smartboards.
