We at IWBUsers.com have had the chance to try out the new SMART Table almost one year ago at Bett in a Beta version.

Now SMART launches this really interesting product as a big blast.

SMART Table is intended for K6 students and is a Multi touch 27 inch big table with the ability for multiple students to interact.

The SMART Table uses SMARTs DVIT Technology also used in SMARTs Flatpanel overlay and rear projection systems. The system comes complete with a PC stuffed with applications and SMARTs Tool Kit that enables teachers to make their own material that should be used.

Files are easily transfered with a ordinary USB key and can be made on the teachers computer.

SMART Table also works with SMARTs award winning Notebook software.

Speakers are also included in the table for maximum multimedia use.

Students can interact and use multiple fingers to twist and turn objects, resize and other things need to complete the task they are given.

We heard this latest version of the Table will be show in school shows all over the world now - in the Nordics it will be shown in Sweden at Skolforum 27-29 october.

Se a short demonstration in the below video clip.
