Friday, 28 August 2009

SMART has release their own "office" but instead you might call it "scool" package. The SMART Classroom suite includes the award winning SMART Notebook, SMART Sync, SMART Notebook SE (Student Edition) and SMART Response CE. Together, these software applications support the key stages of teaching and learning – from lesson creation and delivery to student assessment. SMART see the different software used in several ways.

Use SMART Notebook and SMART Notebook SE to create multimedia lesson plans, activities and projects.

Deliver engaging, curriculum-based content with SMART Sync and SMART Notebook.

Support learning and seamlessly transition among individual, small-group and whole-class activities with SMART Notebook SE and SMART Sync.

Assess student progress and understanding with SMART Response CE and SMART Notebook SE.

According to SMART "A typical day with SMART Classroom suit might start with

the teacher creating a multimedia lesson activity with SMART Notebook. Then, using SMART Sync, the teacher would share the lesson with all the students in the class. The students would open the lesson activity with SMART Notebook SE and start adding notes as the teacher delivers the lesson. Finally, with SMART Response CE, the teacher would send a quiz to students to assess how much of the material they understood. All the while, the teacher could use SMART Sync to monitor student activity and interact with an individual, a group or with the entire class. "
